

# Jovan Stojkovic

## Curriculum Vitae

Computer Science Department  
University of Illinois at Urbana-Champaign  
✉ [jovans2@illinois.edu](mailto:jovans2@illinois.edu)

## Research Interests

My focus is on cloud computing data platforms and deployment paradigms, such as microservices and serverless computing. I enjoy building systems and exploring ways to make them fast, reliable, and efficient in a holistic manner: from the hardware architecture up to the platform and application level.

## Education

- August 2020 – **University of Illinois at Urbana Champaign.**
  - Present PhD in Computer Science
    - **Advisor:** Professor Josep Torrellas
    - GPA:** 4.0/4
    - Passed Qualifying Exam:** October 2021
- 2016 – 2020 **School of Electrical Engineering, University of Belgrade, Serbia.**
  - B.S. in Electrical and Computer Engineering
  - **Awards:** Best student of Computer Engineering and Information Theory Department for years: 2017, 2018, 2019 and 2020
  - GPA:** 9.89/10
- 2012 – 2016 **High School Bora Stankovic, Vranje, Serbia.**
  - Applied Sciences and Mathematics
  - Award:** Best student
  - GPA:** 5/5

## Awards and Honors

- April 2022 **Kenichi Miura Award - Excellence in High Performance Computing**, Department of Computer Science University of Illinois at Urbana-Champaign.
- March 2022 **International Conference on Architectural Support for Programming Languages and Operating Systems (ASPLOS) Student Travel Grant**, NSF and ASPLOS Conference.
- April 2020 **Best Research Artifact Award**, International Conference on Information Processing on Sensor Networks (IPSN).
- 2017, 2018, 2019, 2020 **Best Student of Computer Engineering and Information Theory Department Award**, School of Electrical Engineering, University of Belgrade.
- July 2016 **Bronze medal in 48th International Chemistry Olympiad**, Tbilisi, Georgia.
- September 2015 **II degree for research work in the field of Biology**, XX Annual Bios Olympiad, St. Petersburg, Russia.
- 2016 – 2020 **Stipend for Young Scientist/Researcher**, from Serbian Ministry of Education, Science and Technological Development.
- 2010 – 2016 **Numerous Gold, Silver and Bronze Awards at National Level Competitions in Physics, Chemistry, Biology and Mathematics.**

- December 2016 **Serbian Academy of Sciences and Arts Award for Results at International Olympiads.**
- December 2016 **Serbian Chemistry Society Award.**
- July 2017 **Dositeja Award from Young Talent Fund of the Republic of Serbia.**
- January 2015 **St. Sava Award for the Best Student of Pcinja District.**

## Publications

**J. Stojkovic**, D. Skarlatos, A. Kokolis, T. Xu, J. Torrellas, "Parallel Virtualized Memory Translation with Nested Elastic Cuckoo Page Tables", *In Proceedings of the 27th ACM International Conference on Architectural Support for Programming Languages and Operating Systems (ASPLOS)*, March, 2022.

G. Lan, Z. Liu, Y. Zhang, T. Scargill, **J. Stojkovic**, C. Joe-Wong, M. Gorlatova, "Edge-assisted Collaborative Image Recognition for Mobile Augmented Reality", *ACM Transactions on Sensor Networks*, February, 2022.

Z. Liu, G. Lan, **J. Stojkovic**, Y. Zhang, C. Joe-Wong, M. Gorlatova, "CollabAR: Edge-assisted Collaborative Image Recognition for Mobile Augmented Reality," *In Proceedings of the International Conference on Information Processing on Sensor Networks (IPSN)*, April, 2020. – **Best Research Artifact Award**

**J. Stojkovic**, Z. Liu, G. Lan, C. Joe-Wong, M. Gorlatova, "Demo: Edge-assisted Collaborative Image Recognition for Augmented Reality," *In ACM Conference on Embedded Networked Sensor Systems (SenSys)*, November 2019, <https://www.youtube.com/watch?v=RFCxe9ZAVQw> .

**J. Stojkovic**, M. Mistic, J. Protic, "Collaboration Network Analysis of Scientific Production at UB-SEE", *In 27th Telecommunications forum (TELFOR)*, November 2019.

**J. Stojkovic**, D. Stojkovic, "Combined Infusions of Plants, Traditionally Used for Fever in Serbia, Inhibit the Growth of Pathogenic Bacteria", *In XX INTERNATIONAL BIOS Youth Olympics, Saint Petersburg, Russia*, September 2015.

## Research Experience

- May – August 2022 **Intern, Hybrid Cloud, IBM Research**, Advisor : Dr Hubertus Franke, Thomas J. Watson Research Center, NY.
- August 2020 – Present **Research Assistant at University of Illinois at Urbana-Champaign**, Advisor : Professor Josep Torrellas, Rethinking Architecture and Operating Systems for Modern Virtualization Technologies.
- May – July 2019 **Duke ECE REU Program**, Advisor : Professor Maria Gorlatova, Edge Computing Platforms for the IoT and Collaborative AR.
- 2018 – 2020 **School of Electrical Engineering, University of Belgrade**, Advisor : Professor Marko Mistic, Social and Collaboration Networks Analysis.

## Teaching Experience

- 2017 – 2020 **Undergraduate Teaching Assistant.**  
School of Electrical Engineering, University of Belgrade  
Courses: Computer Architecture, Computer Architecture and Organization, Object-oriented Programming, Operating Systems, Computer Networks, Probability and Statistics, Algorithms and Data Structures, Laboratory Exercises in Fundamentals of Electrical Engineering, Databases.

## Projects

- **Leveraging Parallelism in Serverless Workflows (UIUC and IBM)** : Current serverless workloads exhibit multiple levels of overheads, including cold start, virtualization, RPC, and the need to persist temporal outputs in remote storage. To make the matter worse, the overheads have significant cascading effects for applications

that orchestrate multiple functions through control and data dependencies, which is a common practice in complex real-world applications. During the second year of my PhD, I redesigned serverless platforms by 1) applying data and control speculation techniques, and 2) allowing containers to service multiple requests in parallel without violating security, performance or resource utilization requirements.

- **Leveraging Parallelism in Virtualized Address Translation (UIUC)** : In spite of nearly twenty years since the inception of virtualization hardware, address translation still introduces substantial performance overhead in virtualized systems. A major reason why address translation has high overhead is because page tables are currently organized in a multi-level tree that is accessed in a sequential manner. This organization is called radix page tables. During my first year of PhD, I redesigned the virtual memory subsystem in virtualized environments to improve its 1) performance by exploiting available memory level parallelism (Nested ECPTs, ASPLOS 2022) and 2) memory efficiency by breaking the hashed page table into multiple small allocation units while maintaining the same performance through carefully chosen design decisions.
- **Exploring the Design Space of Virtual Memory: Performance, Memory, Energy Efficiency, Security and Hardware Heterogeneity (UIUC)** : I did an extensive study of the virtual memory subsystem in virtualized environments and conducted sensitivity analyses on helper hardware structures. My results suggest that the current radix organization of page tables is not scalable with a large memory footprint workload. Moreover, I reproduced literature solutions to avoid hardware-based address translation and instead use compiler and runtime protection mechanisms. I also explored the virtual memory design for GPUs and available prefetching opportunities inherently exposed by the SIMT model of execution. Finally, I conducted a study on the security implications of different page table and TLB organizations with existing attack and defense schemes.
- **Edge Computing Platform for Collaborative Augmented Reality (Duke)** : I built a platform that allows multiple users' related images, captured with Android phones running Google ARCore, to be processed jointly on an edge server, improving user's quality of object recognition. Additionally, I improved performance by reusing cached results from the database. I also did comparative benchmarking of two image recognition tools (AWS Rekognition and Yolo) in terms of quality and time efficiency. I went further to explore possible trade-offs. The project was presented at Duke's REU Symposium.
- **Compiler, Two-pass Assembler, Linker, Loader and Emulator (University of Belgrade and UIUC)** : I implemented front-end, middle-end and back-end components of compilers for the Micro Java and the Decaf programming language (strongly typed, object-oriented with polymorphism). The implementation includes several optimizations in LLVM: loop fusion, loop unrolling and graph coloring register allocation. I implemented a two-pass assembler with two-address instructions and syntax similar to x86 assembly, written in C++ with output file format based on the ELF file format. In addition, I wrote a linker, loader and interpretative emulator for a processor with Von Neumann architecture.

## Technical Skills

Programming languages: C, C++, Java, Python, Scala, Kotlin, Arduino, Assembly (x86 and ARM)

Worked with FPGA, Arduino Uno, Raspberry Pi

Created applications using JSF, Primefaces, Angular, JS, HTML/CSS

## Miscellaneous

I speak Serbian, English and French. I have been playing tennis for fourteen years and I obtained license to coach children under the age of ten. During my primary education I played violin (for seven years) and was member of scouts. I was member of many non-governmental organizations such as Red Cross, Nexus and others. I love dogs and nature.
